ALTO Cleaning Systems, Inc.

Nothing is more important in the food industry than cleanliness, and ALTO Cleaning Systems offers the most flexible and versatile high-pressure, stationary systems to ensure food processing and manufacturing plants exceed the stringent cleaning demands set by the federal government.

ALTO's **DELTA BOOSTER** system is the industry's most versatile compact central pressure-washer system. This durable, easy-to-maintain, stainless-steel-encased system allows simultaneous operation for up to 18 users and features the renowned KEW C3 pump with four solid ceramic plungers and a low-speed, 1750-RPM Totally Enclosed, Fan-Cooled (TEFC) motor.

The system features a stainless steel cabinet and frame and is simple to maintain and service since the cabinet door is easily removable for complete access.

The **DELTA BOOSTER** offers fully automatic operation (no remote switches or controls) and built-in diagnostics for speedy trouble-shooting. It features a 21-gallon water tank with two inlet solenoids and strainers, sealed crankcase and variable water volume and pressure settings.

Perfect for dual applications, ALTO's **DUO BOOSTER** system boasts the renowned C3 pump, and can take preheated water (up to 185°F) for degreasing tasks.

Transporting accessories or machinery is not needed, cutting down prep time and labor costs. Individual users need not modify settings, reducing error risk and training time.

DUO BOOSTERS have a pump pressure of 300-2600 PSI and max water flow of 5.5 – 11.0 GPM, a water brake tank to prevent back-flow risk; integrated flow sensor for dry-run protection; powerful integrated motor with dual thermo sensors and a pump head with integrated filter.

Both of these systems pay for themselves in water-cost savings alone in as little as 18 months!

Armstrong International, Inc.

Armstrong Takes the Worry out of Your Hot Water

When you need consistent, reliable hot water for food processing or washdown in your facility, Armstrong can deliver a package that's right for you.

For industrial-process, hot-water applications, the compact Flo-Direct® Direct Contact Gas-Fired Water Heater is the most efficient way to generate hot water quickly. To maximize the efficiency of your commercial or industrial domestic hot-water system when steam is available, our Flo-Rite-Temp™ Instantaneous Water Heater maintains accurate control – consistently and reliably. We can also customize our hot-water products to accommodate special applications. And best of all, Armstrong frees you from all hot-water worries throughout your operation. We draw on decades of knowledge and expertise in utility system management to precisely install and dependably maintain your hot-water system.

For more than 100 years, Armstrong has been providing complete utility system solutions through products, education and training. Because we know plant managers are always looking for ways to make their facilities more efficient, we offer total system solutions for steam, air and hot water.

In addition to energy- and cost-saving products, Armstrong provides comprehensive services. We offer turnkey installation, operation and maintenance services; steam and compressed air system audits; steam trap management; process drying optimization; condensate system improvement; insect heat treatment; and hot-water solutions for process, safety, sanitation and domestic applications – all of which can be customized to help improve your bottom line. To learn more, contact Armstrong or visit our Web site today.
