

CITGO Petroleum Corporation

CITGO Petroleum Corporation has more than 40 years experience in the manufacturing of food grade white mineral oils for the food processing industry. In fact, CITGO is the only lubricants marketing company that is basic in paraffinic, naphthenic and white mineral oils. CITGO manufactures and markets both food grade white mineral oils and formulated food grade white mineral oil products — a distinction that has helped make CITGO essential to this industry.

CITGO's Clarion® food grade white mineral oils serve a wide array of food processing applications. They meet kosher certification requirements and the requirements of the US Food and Drug Administration (FDA). CITGO's formulated Clarion oils are not only safe to use in a food processing environment, they also protect machinery against wear, rust and corrosion.

The Clarion® product line includes antiwear (A/W) hydraulic oils, HTEP grease and CompressorGard® FG.

For more information about Clarion® and other CITGO products, contact CITGO Petroleum Corporation at 1-800-331-5483, extension 5247 or visit us online at www.citgo.com.

DCI, Inc.

DCI, Inc., an employee owned company, has been a leader in the design, manufacturing and servicing of stainless steel/other alloy equipment since 1955.

The sizes and shapes of DCI manufactured equipment are as varied as the customers we serve. From 5 gallon process vessels to 500,000 gallon field-fabricated tanks, DCI tanks process, blend, store, heat, cool, mix and ferment the most trusted products and brands in the market.

As a custom fabricator, we proudly serve the food, dairy and beverage industries with:

- Tanks/Vessels (silo tanks, processors, starter tanks, whey crystallizers, round horizontal tanks, mix/blend tanks, Dynamixer & Dynamixer Processor tanks, and DCI Site-Fab field-fabricated tanks).
- Mixers/Agitators
- Manways, Heads, Components
- Replacement parts
- Field Service/Repair

The DCI Dynamixer is designed to mix dry solids, semi-solids or liquids into a slurry or liquid product. This high speed mixer/blender may also be used to blend, disperse, reconstitute, dissolve, re-hydrate, prebreak or rerun soluble solids, soluble pastes and liquids quickly, efficiently and completely. Insoluble products are dispersed into liquids to make suspensions and slurries with greater stability and homogeneity. Models are available in a variety of shapes, sizes and motor horsepower to fit a broad range of applications.

DCI's Dynamixer Processor combines all the features of Dynamixer high speed mixer with the benefits of a cone bottom processing tank. It can perform three separate process functions all in the same tank: mixing dry or semi-solids into a liquid, chop and chip solids, and heat and/or cool the mixed batch!
