

## GALVAMET

### Energy Efficient Insulated Metal Building Panels

Galvamet, a division of the Hylsa Steel Group, manufactures factory insulated metal wall and roof panels for application in the cold storage and food processing building industry. Its factory features three modern, fully automated European manufactured continuous production lines.

Galvamet produces energy efficient factory insulated metal wall, interior partition, and roof panels for commercial, industrial, architectural, and cold storage applications. The product line includes 42" wide concealed fastener wall panels with a choice of four exterior profiles. Each panel

features thickness choices of up to 6" (R48.78) of CFC-free foamed-in-place isocyanurate. Galvamet also manufactures trimless end architectural panels up to 40" wide for vertical and horizontal applications.

The Galvamet Shadowline profile panel is ideal for **interior partition walls**, and is available with a 26 and 304 ga. embossed stainless steel finish. The Galvatherm Stucco Wall panel provides a unique embossing pattern that simulates the look of concrete masonry stucco, yet offers the **most energy efficient wall system** available today. For **roofing systems**, Galvamet offers its extremely strong Hi-Rib panel that is designed to span long distances between wall girt and roof joist. It is also available with up to 6" of insulation. Each of these panel products is designed to provide the highest quality, long lasting performance to meet today's demanding cold storage building requirements.

Full information covering company background, manufacturing technology, color choices, performance tests, quality standards and certifications, and full technical details are available upon request. For more information go to [www.galvamet.com](http://www.galvamet.com).

Galvamet is a division of the Alpha Group, a \$5 billion industrial corporation, and is also part of Alpha's Hylsa steel group.

## Heat and Control, Inc.

Heat and Control designs and builds complete processing, packaging and control systems for:

- Snack foods, including potato chips, corn and tortilla chips, nuts, extruded and expanded snacks, fruit-filled pies and bagels.
- Prepared foods including meat, poultry, seafood and vegetable products.
- Corn tortillas, taco shells and tostadas.
- French fries and formed potato products.

We also build continuous ovens and fryers for institutional food service kitchens.

Our Packaging Systems Division supplies Ishida multihead weighers and checkweighers, Fast-Back® horizontal motion conveyors, bucket conveyors, and tray, carton, can and multi-compartment fillers for food and non-food products.

Under the same ownership since 1950, Heat and Control works to establish long-standing relationships that make us your partner, not merely another machinery supplier.

We take pride in being industry specialists and devote the time to understand your goals, to create machinery of the highest quality, and to support you with expert technical services, convenient parts inventories, and extensive training programs. We also maintain Technical Centers where you can test your products - or develop new ones - using the latest coating, cooking and packaging machinery.

With manufacturing plants and offices in over 30 locations worldwide, Heat and Control offers local, knowledgeable service and innovative technology developed from installations around the world.
