Hunter Wall & Ceiling Systems

Hunter Wall & Ceiling Systems

Hunter Wall & Ceiling Systems designs, supplies, and installs sanitary walls, ceilings, windows, doors and lighting systems for the food industry. These systems are designed to provide extended life and durability for food plant environments.

Walls:

The reinforcement, length and FRP thickness are designed for customer's projects. Hunter panel joints have a positive seal using Hunter's unique aluminum extrusion.

Ceilings:

For the accessible ceiling we offer the Hunter HD Grid System. The grid has a 2" section and is extruded aluminum flexible enough to allow custom sized H.E.P.A. filters and lights.

Lights:

Advancements in lighting systems have led Hunter to develop a fluorescent fixture using cutting edge T5 technology. Hunter fixtures have an aluminum body, are 4 tube and come with reflectors and electronic ballasts. The lens frame is anodized aluminum, sealed and gasketed. This fixture is designed to save the customer 31% in energy costs over comparable metal halide fixtures.

Doors & Windows:

Hunter doors have a core of high density EPS with kiln dried wood perimeter frame. FRP skins are laminated to both sides with reinforcements for locksets and closures. The trim is stainless steel. Windows, kick plates, lock sets and closures are optional. Our windows are custom made to customer sizing requirements and come with heavy duty aluminum frames, Thermal-Seal, safety or tempered glass and trimmed with stainless steel. Hunter installations carry a 5 year warrantee.

Our products are HACCP Accepted
