

Orkin Commercial Services

Inspection scores are showing a marked improvement.

Orkin Commercial Services has developed an exclusive program called Gold Medal Protection™. As more and more food processing facilities partner with Orkin, they're seeing a big improvement in their inspection scores.

Orkin's Gold Medal Protection gives your sensitive food processing facility a level of security and protection that's unmatched. A Monitoring Center is installed inside the plant, which contains critical documentation that serves to protect your facility. Orkin's Gold Medal Protection is a comprehensive system that meets or exceeds a plant's needs and the needs of any programs and auditing agencies, such as HACCP, AIB, FDA, and the USDA.

The program is monitored by Orkin's Quality Assurance Team. A group that's comprised of Ph.D.s, certified entomologists, sanitarians, food safety experts, and commercial and industrial specialists with an average of over 15 years of experience in pest management. They set up a customized pest control program, and Orkin's trained and certified technicians execute it. Their training includes Good Manufacturing Practices (GMPs) and comprehensive studies from Purdue University and the American Institute of Baking. Orkin was recently named the best company for training by *Training & Development* magazine.

We're so confident in our Gold Medal Protection Program that we offer a triple guarantee.* Simply put, you'll be satisfied with Orkin's service.

Contact: 1-800-ORKIN-NOW or orkin.com

* Your account must be current, under contract for over 60 days, and your business must be in compliance with sanitation requests as noted on Orkin service reports. See contract for complete details.

Powder Technologies Inc

Company Overview

Powder Technologies' founders, Rick Isherwood and Alberto Rodriguez, have been providing quality powder processing components, systems, and service working with various companies for a combined

experience of over 30 years in the industry. With the founding of their own company in 2002 they have been able to apply their straightforward philosophy of providing "the best equipment needed to meet or exceed customer requirements" without the corporate requirement to meet a quota or attain specific sales numbers. This approach allows them to truly work with their customers and not force other nonessential elements into the design mix. Powder Technologies Incorporated (PTI) is dedicated to bringing, on time and at competitive prices, the best in engineering, systems, processing equipment, components, and service to the chemical, pharmaceutical, food and materials processing industries. According to Rick Isherwood, "we believe the best way to achieve this goal is to closely attend to the [customer's] requirements, educate the customer about all options available—the comparative advantages and disadvantages, and assist them in making the most informed selections. Coupled with this we bring together the most experienced, highly regarded processing equipment manufacturers in the world and our innate knowledge of the industry and systems design." info@powdertechusa.com. THE GERICKE GROUP, with its headquarters in Regensdorf Switzerland and manufacturing facilities in England, Germany and Switzerland, is a company with over 110 years of engineering, design, and manufacturing experience. Gericke has been providing handling and processing equipment for dry bulk solids since 1894 and was one of the first companies to explore and develop the guiding principles for transferring materials pneumatically. Today Gericke manufactures a wide range of feeding, mixing, sieving, conveying, size reduction, and process control equipment and complete systems to the world.
