SAFELINE, INC.

Safeline Introduces Metal Detectors that Meet 3A Dairy and USDA Sanitary Standards

Safeline's newest range of metal detectors meets 3A Dairy Sanitary Standards and USDA requirements. Additionally, Safeline can design and manufacture its metal detectors to meet HACCP and FDA requirements and NEMA 4X/IP66 washdown specifications. Available as options on all its field-proven conveyorized metal detectors and pipeline metal detectors, Safeline meets or exceeds the most stringent sanitary demands of the dairy, meat and other food processing industries while supplying solutions that minimize metal contamination in packaged or loose products.

Manufactured with stainless steel construction, continuously welded joints free of imperfections, self-draining product-contact surfaces and easy-accessibility to product contact surfaces for cleaning, Safeline metal detectors meet or exceed the criteria for a variety of sanitary standards.

With space-age liners permanently welded to the body and membrane touch pads protecting the electronic brains, Safeline can design its detectors to be impervious to flooding, moisture and dust.

All Safeline metal detectors offer advanced, microprocessor-based technology that incorporates digital-signal processing. The metal detectors all feature an automatic set-up that adjusts to optimum performance by simply passing a few sample products down the line. Automatic Balance Control (ABC) maintains the highest sensitivity levels despite temperature fluctuations, electronic aging and product build-up. Safeline minimizes false rejects with a rigid coil system that virtually eliminates vibration interference.

About Safeline

Safeline Metal Detection is the largest metal detector manufacturer in the world, with operations in the USA, UK and Continental Europe. Safeline provides conveyorized, gravity feed and pipeline metal detection systems for food, pharmaceutical, chemical, plastics and powder/bulk industries.

SIEMENS ENERGY & AUTOMATION

Siemens Energy & Automation, Inc. delivers complete electrical, engineering and automation solutions to customers around the world. Supplying the right products, software and services has made Siemens Energy & Automation a valuable partner with some of the world's largest and most respected industrial, manufacturing and construction industries.

One of Siemens AG operating companies headquartered in United States, Siemens Energy & Automation is based in Alpharetta, Ga., just outside of Atlanta. The company's wide technological range offers circuit protection, energy management systems, process control, industrial software and totally integrated automation solutions. The company provides expert solutions for systems integration, technical services and turnkey industrial systems.

Backed by more than 9,400 engineers, designers, field service technicians and other professionals, Siemens Energy & Automation's customers also enjoy the support and expertise of more than 400,000 employees from Siemens-affiliated companies worldwide.

In addition, Siemens Energy & Automation invests more than \$32 million each year in research and development – an investment that pays off by helping Siemens customers accomplish their goals faster and more efficiently.
