Charles Ross & Son Company

Ross Ribbon Blenders in Stock, Priced up to 30% less.

Charles Ross & Son Company, the world's largest manufacturer of Ribbon Blenders, now maintains a large selection of Ribbon Blenders in stock for immediate delivery. All are priced up to 30% below most major competitors. Sizes normally in stock include 1, 5, 10, 18, 25, 36, 52, 62.5, 80, 100 and 120 cu.ft. working capacity.

The complete line of Ross Ribbon Blenders ranges from .5 to 515 cu.ft. working capacity. Standard designs accommodate materials with a bulk density up to 60 pounds per cu.ft.. Each sanitary blender is constructed in type 316 stainless steel, and both exterior and interior surfaces are polished. Ross Ribbon Blenders include a compact right angle drive system and a manually operated valve located in the bottom center of the trough.

Ross High Shear Mixers Equipped for High Speed Powder Induction

The Ross SLIM (Solid/Liquid Injection Manifold) system accelerates the process of wetting out hard-to-disperse solids and virtually eliminates the clogging that has plagued eductor-based alternatives.

Available in either an in-line or batch configuration, the mixer draws solids and liquids into the mix chamber and subjects the mixture to intense mechanical and hydraulic shear. Even solids such as Carbopol, fumed silica and gums are dispersed instantly, and agglomerates are prevented from forming.

DCI, Inc.

DCI, Inc., an employee owned company, has been a leader in the design, manufacturing and servicing of stainless steel/other alloy storage and processing equipment since 1955. We are a proud supplier to the food, dairy and beverage industries and are members of FPMA, IAFIS, FISA, IDFA and SECO.

As a custom fabricator, we proudly provide:

- Tanks/Vessels (silo tanks, processors, starter tanks, whey crystallizers, round horizontal tanks, mix/blend tanks, Dynamixer & Dynamixer Processor tanks, and DCI Site-Fab field-fabricated tanks).
- Mixers/Agitators
- Manways, Heads, Components
- Replacement Parts
- Field Service/Repair/Maintenance Programs

DCI will display the Dynamixer Processor tank, which combines high speed mixing with the benefits of a cone bottom processing tank. It can perform three separate process functions all in the same tank: mixing dry or semi-solids into a liquid, chopping and chipping solids, and heating and/or cooling the mixed batch. Models are available in a variety of shapes, sizes and motor horsepower.

This equipment has the ability to blend, disperse, reconstitute, dissolve, re-hydrate, prebreak or rerun soluble solids, soluble pastes and liquids quickly, efficiently and completely. Insoluble products are dispersed into liquids to make suspensions and slurries with greater stability and homogeneity.
