## Orkin Commercial Services

### Inspection scores are showing a marked improvement.

Orkin Commercial Services has developed an exclusive program called Gold Medal Protection.™ As more and more food processing facilities partner with Orkin, they're seeing a big improvement in their inspection scores.

Orkin's Gold Medal Protection gives your sensitive food processing facility a level of security and protection that's unmatched. A Monitoring Center is installed inside the plant, which contains critical documentation that serves to protect your facility. Orkin's Gold Medal Protection is a comprehensive system that meets or exceeds a plant's needs and the needs of any programs and auditing agencies, such as HACCP, AIB, FDA, and the USDA.

The program is monitored by Orkin's Quality Assurance Team. A group that's comprised of Ph.D.s, certified entomologists, sanitarians, food safety experts, and commercial and industrial specialists with an average of over 15 years of experience in pest management. They set up a customized pest control program, and Orkin's trained and certified technicians execute it. Their training includes Good Manufacturing Practices (GMPs) and comprehensive studies from Purdue University and the American Institute of Baking. Orkin was recently named the best company for training by *Training & Development* magazine.

We're so confident in our Gold Medal Protection Program that we offer a triple guarantee.\* Simply put, you'll be satisfied with Orkin's service.

**Contact:** 1-800-ORKIN-NOW or orkin.com

\* Your account must be current, under contract for over 60 days, and your business must be in compliance with sanitation requests as noted on Orkin service reports. See contract for complete details.

## Parker Hannifin Corporation

### New Nitrogen Generation Systems Produce Up To 99.95% Pure Compressed Nitrogen On Site.

New, second generation Balston membrane nitrogen gas generators are now available from Parker Hannifin Corporation. Parker Balston is pleased to announce the introduction of the Nitrosource Nitrogen Generators.

Proven to be the best performing nitrogen generators, Parker/Balston has completely redesigned this product line and packed it full with new features and more efficient membrane. The Nitrosource nitrogen generators offer paybacks of less than 2 years with very little maintenance required.

Included in this new design, is a digital data management system offering status information, system set up information, maintenance indicators, detailed alarm functions, extensive data exchange facilities and remote control option.

The Nitrosource nitrogen generators now offer a unique modular design that provides for low cost added output capacity. The product is designed to expand from front to back which allows for easy transportability through standard size doorways. Modules can be added to the main unit in the event additional output capacity is required in the future. In addition all models come standard with prefilters, carbon tower, membrane filter and a built-in oxygen monitor.

The Nitrosource nitrogen generators offer flow rates from 20 scfm up to 120 scfm with nitrogen gas purities from 95% to 99.5%. Constructed of anodized aluminum with a durable powder coat finish these generators will stand up to the harshest environments.

For additional information or to arrange an appointment call the Technical Services Department at 1-800-343-4048 or 1-978-858-0505. Parker Hannifin Corporation, Filtration and Separation Division, 242 Neck Road, Haverhill, MA 01835. Fax: 978-858-0625.
