Rytec Corporation

The Rytec Corporation, located in Jackson, Wisconsin, is the leading domestic manufacturer of high-speed, high performance doors for the industrial, commercial and cold storage markets. Founded in 1985 when it introduced the first high-speed folding door to the United States, the company is solely dedicated to the design and fabrication of high-speed, high performance doors.

PredaDoor

High-speed doors are most often used in applications with moderate to heavy motorized vehicle traffic and an environmental barrier is required. The door's high-speed helps save energy and increase efficiency. Each of Rytec's doors is built for high cycle applications and is very durable, engineered to run for millions of cycles and operate in the most adverse conditions. Lastly, each of Rytec's doors is designed to withstand the impact of a forklift without damage to the door.

Spiral

Tracking Rytec Corporation's door innovations is like tracking the history of the U.S. high-speed door industry itself. Rytec was the first to engineer high-speed doors for use in cold storage environments and pioneered the development of the patented Break-Away™ bottom bar for roll doors. This revolutionary device allows Rytec's high-speed roll doors to withstand the impact of a forklift and be reset, without tools, in minutes. Products include the award-winning PredaDoor®, an economical high-speed roll door alternative; the hygienic Clean-Roll® door for food processing and clean room applications; and the Spiral®, which combines stylish aesthetics, speed and security in a single door.

With 19 different high-speed rolling, folding and sliding door styles to choose from, all of which can be customized with various options, Rytec has the broadest product line in the industry. With over 50,000 doors installed worldwide, Rytec has a proven track record of manufacturing excellence and innovative thinking. Rytec also has an international network of highly skilled and trained sales and service representatives.

SEW-Eurodrive, Inc.

SEW-Eurodrive Food Industry Option Package

SEW-Eurodrive features its Food Industry Option Package (IOP), a drive system built specifically to address the harsh environments common to the food processing industry. SEW's food industry specialists worked closely with customers to identify specific system requirements and enhancements necessary to meet the rigorous demands of the industry, including damp conditions and chemical wash downs. The result is a customized drive package with the specialized components that are needed for superior performance in harsh environments and a two-year warranty covering any motor failure that results from moisture damage.

The package features TorqLOC® - SEW's patented keyless hollow shaft mounting system designed especially for the food industry - which eliminates the need to supply a key or turn the shaft to exacting tolerances. TorqLOC's interchangeable, tapered bushings fit a variety of standard shaft sizes without additional machining and permit easy removal after years of use.

Key features of the Food Industry Option Package include:

- FT, KT, or ST Series gearboxes with symmetrical stainless steel TorqLOC, or, R/RF Series gearboxes with stainless steel solid output shaft
- Klubersynth UH 1 6-460 synthetic food grade oil, H1 approved
- Multi-layered stainless steel food-industry coating process designed specifically for harsh environments
- Stainless steel oil level plug and stainless steel nameplate
- PTFE seals
- Fully encapsulated inverter duty stator and fully encapsulated conduit box
- Food processing approved connection cable

SEW-Eurodrive, one of the largest global suppliers of drive technology, has supplied the U.S. food industry for over 25 years with the broadest selection of custom drive solutions and the most responsive support in the industry. SEW USA includes a world-class manufacturing plant, 5 assembly centers, and over 60 technical sales offices strategically located across the country. Our worldwide manufacturing strength combined with local assembly/support capability nationwide ensures consistent quality in drive technology, service and support to the food industry across American, and around the world.
