Shambaugh & Son, L.P.

"Design-Builder of 3 U.S. Food Plant of the Year Winners"

Who is the "right fit" for your projects? Your culture? Your demands for innovation? Your need for business improvement beyond just building a project? What construction delivery method is the "right fit" for your schedule and budget?

Whether you are a valued repeat customer, or a prospective client, considering a \$50,000 or \$50,000,000 budget, planning a retrofit or a new facility, we urge you to visit with us to learn how Shambaugh & Son may be the "right fit" for you and your company. With our

continued growth and nationally recognized award winning projects, we think we are the "right fit" for you now more than ever. We offer your project team success through innovation, single source responsibility, lower "total" costs, fast track schedules and a performance proven record.

Allow us to discuss our "Value Added" Services with you:

- Process Improvement/Optimization
- Process and Facility Simulation/Modeling
- Process Control Integration/Automation
- Diverse Experience in Various Industries
- Modular Prefabrication
- Design/Build "Self-Performance"

As you begin to put all of the pieces of the puzzle together for your next project, you may find that Shambaugh & Son is the right "fit" for you as many other repeat customers have for over 80 years.

Shat-R-Shield

Shat-R-Shield's history dates back to the late 1960s, when Jim Nolan co-founded a company called *Incoplas* that provided job-shop, plastic-coating services. This company developed an expertise in coating a variety of products with nylon, epoxy, vinyl and other plastic materials.

The company's extensive experience with plastics then led to its involvement in providing safety coatings on glass containers and bottles. Combining the technology of safety-coating glass, with additional research and testing, Shat-R-Shield was born and successfully introduced the first plastic-coated, fluorescent lamp. This event effectively established the "protective lighting industry".

Today, Shat-R-Shield product offerings for industrial and foodservice applications include a wide range of fluorescents, incandescents, HIDs, globes and most recently, germicidal lamps. If accidentally broken, a Shat-R-Shield lamp will contain virtually all glass, phosphors and mercury inside the skin-tight, clear and tough plastic coating for no-risk disposal.

For over 30-years, Shat-R-Shield has been the pioneer and leader in protective lighting; continuing to offer the most innovative and most comprehensive line of safety-coated, shatterproof lamps and lighting products in the industry.
