Paul Mueller

Paul Mueller Company is your one-stop supplier. Mueller® fabricates processing equipment for heating, cooking, mixing, blending, cooling, and storing. High-quality stainless steel is used to provide the performance, durability, and reliability expected by the food processing industry.

Since our inception in 1940, Mueller has evolved into a global process solution provider. Paul Mueller Company is a certified ISO 9001:2000 company with one million square feet of manufacturing space under roof. Our products are used in over 100 countries in a wide variety of applications. We offer a full range of tanks/vessels from shop fabricated alloy vessels through 20 feet in diameter to field fabricated vessels up through 2,000,000 gallons, but we do more than tanks — we provide process solutions. We offer integrated systems, modular fabrication, field construction, plant maintenance and repair, and complete turnkey project execution.

We know that building a quality product starts from the ground up. Our sole purpose is to improve profit performance for our customers through our products and service offerings. Mueller has been built by focusing our extensive resources, process experience, and craftsmanship on solving the processing needs of our customers. Mueller has the technical expertise, innovative engineering, and manufacturing resources to implement a process system specific to your needs.

Reiser

Reiser offers a variety of packaging machine solutions for the food industry. Their packaging line includes:

- Repak horizontal form/fill/seal equipment
- Supervac automatic belt-fed vacuum chamber machines
- Ross tray sealing equipment

Each line includes various models to suit applications of all sizes and can package all kinds of food products, from prepared foods and ready-meals to cheese, pasta, vegetables and meat. Reiser packaging equipment provides cost-effective packaging solutions that not only enhance product presentation and extend shelf-life, but ensure quality package seals and product integrity.

Repak RE30

Repak

Repak packaging machines feature the highest cycle speeds in the industry. These heavy-duty machines are constructed of stainless steel to allow complete washdowns and the highest levels of sanitation. Only Repak machines are constructed with two 4-point lifting stations, which can generate up to five metric tons of closing pressure for reliable sealing and more uniform forming.

Supervac

Supervac vacuum packaging equipment features a state-of-the-art, in-line design and superior sealing technology. Engineered for lower maintenance costs, all models offer stainless steel construction for complete sanitation. Supervac's patented expansion cushion increases output with shorter evacuation times. Its Double Biactive Sealing technology eliminates leakers — offering a perfect seal every time.

Ross Traysealer

Ross

Ross tray packaging machines produce modified atmosphere packages to protect the integrity of virtually any food product. They handle a wide variety of tray sizes and materials including barrier foam, CPET, and paper board and can be equipped to handle shrinkback/high clarity film — all with superior seal integrity.
