SlipNOT® Non-Slip Stainless Steel Flooring

SlipNOT® slip resistant stainless steel plate is 100% grit free.

Food and Beverage facilities utilize SlipNOT® slip resistant stainless steel products to increase productivity and worker safety while reducing injury and liability. SlipNOT® products have a fine hard surface that is over 55 on the Rockwell "C" scale and have a bond strength of over 4000 psi. SlipNOT® products are NSF registered and are currently used in food processing plants, cheese plants, poultry processors and beverage plants among others. SlipNOT® products exceed all requirements for ADA, OSHA, ASTM and ANSI.

SlipNOT® Stainless Steel products are used by companies such as: Campbell Soup, Nestle, Tropicana, Pillsbury, Kraft, Leprino Foods, and Sara Lee among many other food processors to keep workers safe and on their feet.

SlipNOT® stainless steel flooring in a cheese processing plant.

SlipNOT® non-slip products have over 2x the load capacity of fiberglass flooring. These products provide a long lasting, maintenance free, alternative to fiberglass products, while withstanding the caustic enzyme environments that are found in many food processing plants. SlipNOT® products can easily be cleaned by standard methods such as power washing and brushing.

SlipNOT® slip resistant products are available in stock sizes or can be manufactured and fabricated to detailed print specifications. SlipNOT® products are easy to fabricate; they can be sheared, welded, flame cut, torch cut, laser or water-jet cut, plasma cut, counter-sunk, drilled and punched for complete versatility both in the shop and field.

From floor plates, ladder rungs, stair treads, drains and mezzanines, SlipNOT® stainless steel slip resistant products are the one time answer to dangerous situations in the wet and slippery areas of food processing plants.

T.D. Sawvel Company, Inc.

T.D. Sawvel designs and manufactures high quality stainless steel equipment and tooling to fill, lid, denest, seal or variegate a wide variety of packaging shapes, from one ounce to six gallons, for use with many different products. For over 30 years T.D. Sawvel has worked in partnership with its customers to identify best-case automated packaging solutions to help customers achieve their business objectives.

One of T.D. Sawvel's major product lines is designing and building scale-filling machines for liquid products, either in single or dual head configurations. Fully or semi-automatic systems are available to provide the widest range of solutions for customers' filling needs. Automatic lidding and denesting capabilities can be added to fully automate any filling line. Both top fill and subsurface fill are available in semi-automatic and fully automatic machines. These machines are suitable for packaging edible oils, fruit flavorings, mayonnaise and dressings, syrups, and other products in containers ranging from 1/2 gal. to 6-gal. sizes.

Another major focus for T.D. Sawvel is the expansion of their line of piston depositors, which draw product from a hopper into a cylinder using a piston.

These machines are most often used for filling batch ice cream, yogurt, potato salad, bean and chip dips, and similar products. Our piston depositors can accommodate package sizes ranging from .8 oz. up to 128-oz. and are available in tabletop, floor-stand or machine mounted configuration. The piston filler allows the operator infinite volume adjustment to achieve exact weights, dependent on the product or cup size being filled.
